

## 1 Abstract of the Disclosure

2 A rebar spacer having a clip for securely holding a rebar centered in the clip such  
3 that the rebar cannot be dislodged from the clip once the clip engages the rebar. The clip  
4 is held at a desired height by a base, which will not easily tip over do to a wide stance of  
5 the base of the rebar spacer. The rebar spacer will quickly and easily accept the rebar in  
6 the clip. The rebar spacers can have a large or small footprint at the surface of the  
7 concrete. The rebar spacer can be made of lightweight, durable plastic. The rebar spacer  
8 can be molded as one inexpensive piece. The rebar spacer can have a variety of heights  
9 and accept a variety of rebar sizes.
